INVISIBLE VOICES

Hackathon Project Framework

Project tagline: Their voices. Their rights. Our responsibility.

Project category: Social Impact, Human Rights, Digital Education and Awareness

Project type: Digital Awareness Platform

Methodological approach: Human-Centered Design, Research-Based Content Development and Iterative Prototyping

---

1. PROJECT OVERVIEW

Invisible Voices is a digital awareness platform designed to increase understanding of the restrictions and challenges faced by Afghan women and girls regarding their fundamental rights.

The platform provides an educational experience that combines documented stories, contextual information, educational resources and opportunities for responsible action. Its purpose is to help users move beyond simply hearing about the issue and toward understanding its broader social context.

The project follows three main stages: LISTEN, UNDERSTAND and TAKE ACTION. These stages guide users from discovering documented experiences to understanding the importance of women's rights and identifying meaningful ways to support awareness and advocacy.

Invisible Voices is designed as an accessible and educational digital experience, particularly for students, young people and individuals interested in human rights.

Mission: To make reliable information about Afghan women's rights more accessible and encourage informed, responsible action.

Vision: To contribute to a world in which women's experiences are heard, their rights are respected and access to reliable human rights information is available to more people.

Core principle: Every story must be treated with dignity, accuracy and respect.

2. PROBLEM STATEMENT

Afghan women and girls face significant restrictions affecting their access to education, employment, freedom of movement and participation in public life. These restrictions have consequences for individual opportunities, social participation and the exercise of fundamental human rights.

Although information about this situation exists through international organizations, journalists and human rights researchers, people may encounter fragmented information or struggle to understand the experiences behind the facts.

A lack of accessible, engaging educational resources can make it difficult for young audiences to connect documented information with its wider human rights context.

Invisible Voices addresses this educational challenge by organizing information into a clear, accessible digital journey that combines documented experiences, contextual explanations and responsible action resources.

The project does not claim that information is unavailable everywhere. Instead, it seeks to make existing, reliable information easier to discover, understand and use for educational purposes.

3. PROJECT JUSTIFICATION

Invisible Voices is based on the principle that awareness is an important step toward informed participation in human rights advocacy.

A digital platform can help users explore complex issues at their own pace, access supporting information and identify credible resources for further learning.

The project is relevant because it:

- Promotes awareness of women's rights and gender equality.
- Encourages critical thinking about restrictions on fundamental freedoms.
- Makes educational information easier to navigate.
- Connects learning with practical, responsible actions.
- Encourages empathy without reducing people's experiences to stereotypes.
- Supports discussion and learning in educational environments.

Invisible Voices is an educational initiative. Its contribution is to improve access to information and encourage informed engagement, rather than claiming to directly change laws or policies.

4. PROJECT OBJECTIVES

4.1 General Objective

To develop an accessible digital awareness platform that helps users understand the challenges faced by Afghan women and girls through documented stories, educational context and responsible action resources.

4.2 Specific Objectives

1. Organize reliable information about Afghan women's rights in an accessible digital format.
2. Present documented stories and experiences with appropriate context and attribution.
3. Explain the relationship between individual experiences, social conditions and fundamental human rights.
4. Provide educational resources that encourage users to explore the topic further.
5. Identify responsible ways for users to participate in awareness and advocacy.
6. Design a clear and accessible user experience for students and general audiences.
7. Evaluate the prototype through usability testing and feedback.

5. TARGET AUDIENCE

Primary Audience

Students and young people interested in social issues, education, gender equality and human rights.

Secondary Audience

- Teachers and educational institutions.
- Human rights educators and advocates.
- Community organizations.
- Individuals seeking reliable information about Afghan women's rights.

User Needs

The platform is designed for users who need:

- Clear explanations of a complex issue.
- Credible sources for further research.
- An engaging and organized learning experience.
- Practical examples of responsible participation.
- A respectful environment in which sensitive issues are presented carefully.

6. PROPOSED SOLUTION

Invisible Voices proposes a digital platform that organizes awareness and educational resources into three connected stages.

Stage 1: LISTEN

Users discover documented stories, experiences and perspectives related to Afghan women and girls.

The objective is to introduce the human dimension of the issue while respecting the identity, dignity and context of the people represented.

Stage 2: UNDERSTAND

Users explore educational content explaining the broader context of the restrictions, their implications for fundamental rights and the importance of reliable information.

This stage connects individual experiences with verified information and wider social realities.

Stage 3: TAKE ACTION

Users discover responsible ways to continue learning, share verified information and engage with credible educational or human rights initiatives.

The platform encourages informed participation rather than promising immediate or guaranteed policy change.

7. PROJECT SCOPE

7.1 Included in the Project

The prototype includes the following planned or demonstrated areas:

- Educational landing page.
- Voices Archive.
- Beyond the Silence.
- Take Action.
- Share a Story.
- About.
- Navigation between sections.
- Educational content and external reference resources.
- Responsive interface for different screen sizes.

The final report must distinguish features that are implemented and tested from those that remain conceptual.

7.2 Outside the Current Scope

The initial prototype does not claim to provide:

- A secure or anonymous testimony submission system.
- Verified identity protection for contributors.
- Professional legal, psychological or emergency support.
- A comprehensive representation of all Afghan women's experiences.
- Direct intervention in government policy.
- Guaranteed measurable social change.

Any future implementation of sensitive submissions would require appropriate privacy, security, consent and moderation measures.

8. FUNCTIONAL MODULES

8.1 Home

Purpose: Introduce the platform and its mission.

Main functions:

- Present the project's purpose and tagline.
- Explain the LISTEN, UNDERSTAND and TAKE ACTION journey.
- Guide users toward the main sections.
- Establish a clear visual identity.

Expected result: Users understand what the platform is and how to begin exploring it.

8.2 Voices Archive

Purpose: Provide access to documented stories and perspectives.

Main functions:

- Organize available stories.
- Present context and source attribution.
- Help users navigate educational content.
- Encourage respectful engagement with the material.

Content requirements: Stories must be sourced from credible publications or organizations. Any illustrative or fictional example must be clearly labeled and must never be presented as a real person's testimony.

8.3 Beyond the Silence

Purpose: Explain the broader context behind the issue.

Main functions:

- Present educational explanations of relevant restrictions.
- Connect documented experiences with fundamental rights.
- Provide references for further learning.
- Encourage critical thinking and reflection.

Expected result: Users develop a more informed understanding of the issue beyond individual stories.

8.4 Take Action

Purpose: Help users identify responsible ways to participate.

Main functions:

- Share credible educational resources.
- Link to relevant human rights organizations.
- Suggest responsible awareness and advocacy activities.
- Encourage users to verify information before sharing it.

Expected result: Users can identify realistic next steps for continued learning or participation.

8.5 Share a Story

Purpose: Represent the concept of sharing perspectives and experiences.

Main functions: The prototype may demonstrate an interface for sharing a story or reflection.

Ethical requirements: If the prototype does not have a secure backend and appropriate moderation, it must not imply that submissions are securely stored, anonymous or transmitted to a support organization. Demonstration inputs should not be treated as confidential real testimonies.

Any future real submission system would require informed consent, data minimization, moderation, security protections and a clear explanation of how information is handled.

8.6 About

Purpose: Explain the project's mission, approach and limitations.

Main functions:

- Present the purpose of Invisible Voices.
- Explain its educational and social impact goals.
- Describe its ethical principles.
- Clarify the distinction between awareness and direct intervention.

9. PROJECT METHODOLOGY

Invisible Voices follows a human-centered, research-based and iterative development methodology.

This means the project begins with the needs of its audience, uses credible information to guide content decisions and improves the prototype through feedback.

Phase 1: Research and Problem Identification

Activities:

- Identify the central human rights issue.
- Review information from credible international organizations and established publications.
- Identify the intended audience and its educational needs.
- Define the project's scope and limitations.

Deliverable: Problem statement, research notes and initial project requirements.

Phase 2: Definition and Planning

Activities:

- Establish the general and specific objectives.
- Define the main user journey.
- Identify the functional modules.
- Establish ethical and content requirements.

Deliverable: Project requirements and functional structure.

Phase 3: Information Architecture

Activities:

- Organize the platform's sections.
- Define the relationship between LISTEN, UNDERSTAND and TAKE ACTION.
- Determine the navigation structure.
- Identify the information users need in each section.

Deliverable: Site map and user journey diagram.

Phase 4: Prototype Design and Development

Activities:

- Design the interface.
- Develop the principal pages.
- Implement navigation and available interactions.
- Adapt the experience to different screen sizes.
- Add sourced educational content.

Deliverable: Functional or partially functional prototype, depending on the implemented features.

Phase 5: Testing and Evaluation

Activities:

- Test navigation and interactive elements.
- Ask representative users to complete basic tasks.
- Collect feedback about clarity, accessibility and usefulness.
- Identify problems and prioritize improvements.

Deliverable: Testing checklist, feedback summary and improvement list.

Phase 6: Presentation and Future Development

Activities:

- Demonstrate the user journey.
- Explain the problem, solution and methodology.
- Present the prototype's current capabilities.
- Identify limitations and future opportunities.

Deliverable: Hackathon presentation and future development roadmap.

10. USER JOURNEY

The central user journey is:

DISCOVER → LISTEN → UNDERSTAND → TAKE ACTION → CONTINUE LEARNING

1. **Discover:** The user visits the Home page and learns about the mission.
2. **Listen:** The user explores documented stories in the Voices Archive.
3. **Understand:** The user reviews context and educational resources in Beyond the Silence.
4. **Take Action:** The user discovers credible resources and responsible participation opportunities.
5. **Continue Learning:** The user explores references and returns to the platform for further information.

This journey is designed to create a logical transition from awareness to understanding and informed participation.

11. SYSTEM STRUCTURE

The prototype can be described through three conceptual layers.

11.1 Presentation Layer

The visual interface through which users interact with the platform.

Examples:

- Home page.
- Navigation.
- Story cards.
- Educational content pages.
- Action resources.

11.2 Content and Interaction Layer

The organization and presentation of the platform's information and interactions.

Examples:

- Story organization.
- Section navigation.
- Educational content display.
- External resource links.
- Prototype form interactions, where implemented.

11.3 Content Sources and Future Data Layer

The information sources that support the educational content and any data infrastructure that might be developed in the future.

For the current prototype, content may be presented as static material. A database or secure submission service should only be included in the description if it has actually been implemented.

This layered model explains the project's conceptual organization without claiming that unimplemented backend components already exist.

12. ETHICAL PRINCIPLES AND SAFETY

Ethical responsibility is central to Invisible Voices.

12.1 Accuracy

Use credible sources and verify factual claims before publication.

12.2 Respect and Dignity

Present experiences without sensationalism, stereotypes or language that reduces individuals to their circumstances.

12.3 Responsible Representation

Do not invent testimony and attribute it to real Afghan women. Clearly label fictional examples and illustrative content.

12.4 Privacy

Do not promise anonymity or secure data handling unless the necessary technical and operational protections exist.

12.5 Informed Participation

Users should understand the purpose of any form and what happens to information they enter.

12.6 Transparency

Clearly distinguish verified information, interpretation, illustrative material and future project plans.

12.7 Limitations

Invisible Voices is an educational platform. It does not replace qualified professionals, local organizations or established human rights institutions.

13. TECHNOLOGY AND DEVELOPMENT TOOLS

The project's final technical description must reflect the tools actually used to build the prototype.

Prototype platform: [Insert the platform used to build the current demo.]

Frontend technology: [Insert the actual framework, library or technologies used, if known.]

Styling and interface: [Insert the actual styling tools, if known.]

Content management: [Describe how the current content is stored or maintained.]

Backend and database: [State whether these exist. If they have not been implemented, write “Not implemented in the current prototype.”]

Design and diagram tools: Google Docs and Mermaid Live Editor may be used to document and visualize the project framework.

The use of a design or diagram tool does not mean that it is part of the application's runtime architecture.

14. TESTING AND EVALUATION

The prototype should be evaluated according to usability, content quality, accessibility and alignment with its objectives.

14.1 Functional Testing

Check whether:

- Main navigation links work.
- Each implemented section opens correctly.
- External references lead to the intended resources.
- Interactive elements respond as expected.
- The interface works on desktop and mobile screen sizes.

14.2 Usability Testing

Ask users to complete tasks such as:

- Find the project's mission.
- Locate a documented story.
- Find information explaining the broader context.
- Identify a credible action resource.

Observe whether users can complete these tasks and where they experience confusion.

14.3 Content Evaluation

Check whether:

- Claims are supported by credible sources.
- Sources are clearly identified.
- The language is understandable to the target audience.
- Illustrative content is not confused with real testimony.
- The content avoids misleading or sensationalized claims.

14.4 Evaluation Indicators

Possible indicators include:

- Percentage of test users who complete key navigation tasks.
- Number of broken links found during testing.
- User feedback on clarity and ease of use.
- Percentage of reviewed factual claims with traceable sources.
- Number of identified usability issues resolved.

These indicators should be measured during testing. No numerical results should be reported until actual data has been collected.

15. EXPECTED OUTCOMES AND IMPACT

Short-Term Outcomes

- A structured educational awareness prototype.
- Improved access to organized information about Afghan women's rights.
- A clear learning journey connecting stories, context and action.
- Opportunities for students to engage with the issue through research and discussion.

Medium-Term Opportunities

- Collaboration with educators and relevant organizations.
- Expansion of the educational resource collection.
- Improvements based on user testing.
- Additional accessibility features and language options.

Long-Term Aspiration

Invisible Voices aims to contribute to a broader culture of awareness, respect for women's rights and informed civic participation.

Its impact will depend on the quality of its information, the relevance of its resources, user engagement and future development.

16. PROJECT ROADMAP

Stage 1: Research

Define the problem, audience, objectives and reliable information sources.

Stage 2: Planning

Establish the content structure, user journey, modules and ethical requirements.

Stage 3: Prototype

Build and organize the main sections of the digital platform.

Stage 4: Testing

Review functionality, usability, accessibility and content accuracy.

Stage 5: Presentation

Demonstrate the prototype, explain the framework and present the results of any completed testing.

Stage 6: Future Development

Prioritize improvements, consider partnerships and assess the requirements for more advanced functionality.

17. RISKS AND MITIGATION

Risk: Inaccurate or outdated information.

Mitigation: Use traceable sources, review publication dates and update information when necessary.

Risk: Fictional content being mistaken for testimony.

Mitigation: Label fictional or illustrative examples clearly and maintain attribution for documented material.

Risk: Users believing that submitted information is confidential.

Mitigation: Clearly explain prototype limitations and do not collect sensitive real testimonies without appropriate safeguards.

Risk: Broken external links.

Mitigation: Test links before each presentation and review them periodically.

Risk: The platform oversimplifying a complex situation.

Mitigation: Provide context, acknowledge limitations and avoid suggesting that one platform can represent every experience.

Risk: Accessibility barriers.

Mitigation: Use readable text, clear navigation, descriptive labels and responsive design; test the interface on different devices.

18. TEAM ORGANIZATION

The project team should assign responsibilities according to its actual members and capabilities.

Suggested roles include:

Project Coordination: Organizes the timeline, tasks and deliverables.

Research and Content: Reviews sources, checks claims and prepares educational material.

Design and User Experience: Organizes the interface and user journey.

Development: Builds and tests the prototype.

Presentation and Evaluation: Prepares the demonstration and documents feedback.

In a small team, one person may perform more than one role. Responsibilities should be adapted to the actual team rather than presented as completed assignments if they have not been agreed upon.

19. FINAL DELIVERABLES

The project framework and hackathon submission may include:

1. Project framework document.
2. User journey and functional structure diagram.
3. Digital prototype.
4. Source list and content references.
5. Testing checklist and feedback summary, if testing has been completed.
6. Presentation explaining the problem, solution, methodology, demonstration and future development.

20. CONCLUSION

Invisible Voices transforms an important human rights issue into a structured digital learning experience.

By combining documented stories, educational context and responsible action resources, the project aims to help users move from awareness to understanding and informed participation.

Its framework is grounded in research, human-centered design, iterative development and ethical representation. These principles guide the design of the prototype and provide a foundation for future improvements.

Invisible Voices recognizes that technology alone cannot solve systemic human rights challenges. However, a carefully designed educational platform can help make reliable information more accessible and encourage people to learn, reflect and act responsibly.

Their voices. Their rights. Our responsibility.
